

Data Engineer

Bespoke Metrics is a fast-growing data management and risk assessment technology company. We are looking for a Data Engineer to join our experienced team to evolve our data and analytics capabilities to enhance decision-making in the construction insurance industry.

Who You Are:

- Have an interest and passion in Data
- Curious and interested in the latest Data Management technology

What You'll Do:

- Review and manage a large data set
- Develop and maintain a model to monitor data integrity
- Provide quality assurance on imported or collected data and identify inconsistencies
- Provide technical expertise on data cleansing, data mining and data storage
- Automation of processes and reporting
- Employ analytical, conceptual, and creative thinking skills to improve the use of data across all aspects of model development, testing/calibration and internal process

What You'll Need:

- Experience with relational databases (PostgreSQL, MySQL)
- Experience with statistic programming language (Python, R)
- Thorough understanding of data handling and machine learning methods together with broad applied statistics skills
- Proven ability to work cross-functionally and manage a heavy workload
- Advanced level of Microsoft Excel

What You'll Get:

- Convenient and excellent working environment that encourages an entrepreneurial spirit
- Competitive salary with paid vacation days
- Health and Dental benefits
- An Opportunity to grow your career and make an impact to a fast-growing company
