

Front-end Engineer

Bespoke Metrics, a fast growing, data management and risk assessment startup is looking for dedicated front-end engineers to join our expanding team of engineers and data analysts who are helping shape the future of construction technology.

Who You Are:

- You are comfortable with one or more dynamic programming languages.
- You are driven to get results without letting anything stand in your way.
- You can stay ahead of the latest industry trends and technologies.
- You can articulate complex technical issues in plain language.
- You thrive on rapid feedback and iterations within an agile environment.

What You'll Do:

- You'll help shape the future of our company and products.
- You'll contribute to each step of development, from idea to release.
- You'll collaborate with multiple engineering teams and departments.
- You'll participate in the development feedback and code review cycle.

What You'll Need:

- You'll need a strong understanding of the JavaScript language.
- You'll need experience engineering UIs with React.
- You'll need experience in practicing test-driven development.
- You'll need experience working with both GraphQL and REST APIs.

What You'll Get:

- You'll learn and grow with a group of passionate and driven engineers.
- You'll have the ability to work flexible hours.
- You'll receive a competitive salary with paid vacation and personal days.
- You'll get excellent health and dental benefits for you and your family.
- You'll work at a convenient downtown location across from Union Station.
